

Coverage in Wireless Sensor Networks

Dr. Sunandita Debnath
IIT Vadodara

Introduction to Wireless Communication

“Stay Connected Anywhere Anytime”

Application includes:

- *Cellular communication (i.e. Voice and data communication)*
- *Satellite Communication (GPS, Television Broadcasting and Radio Broadcasting, Internet etc.)*
- *Monitoring different environmental phenomenon (e.g. temperature, humidity, underwater environment)*
- *Body area networks (i.e. implanted devices on patient body)*
- *RFIDs*
- *IoT applications (e.g. smart Home and Offices)*

Challenges:

- *Network support for user mobility*
- *Maintaining QoS (quality of service) over unreliable links*
- *Connectivity and Coverage*
- *Cost efficiency*

Introduction to wireless sensor networks

Aim / Goal

1. *Coverage*
2. *Connectivity*

A typical sensor node consists of :

- Sensing unit (consist of many sensors)
- Processing unit
- Transceiver unit
- Power supply unit
- Memory unit
- Location finding unit (optional)
- Mobilizer (optional)

Basic block diagram of a typical sensor node

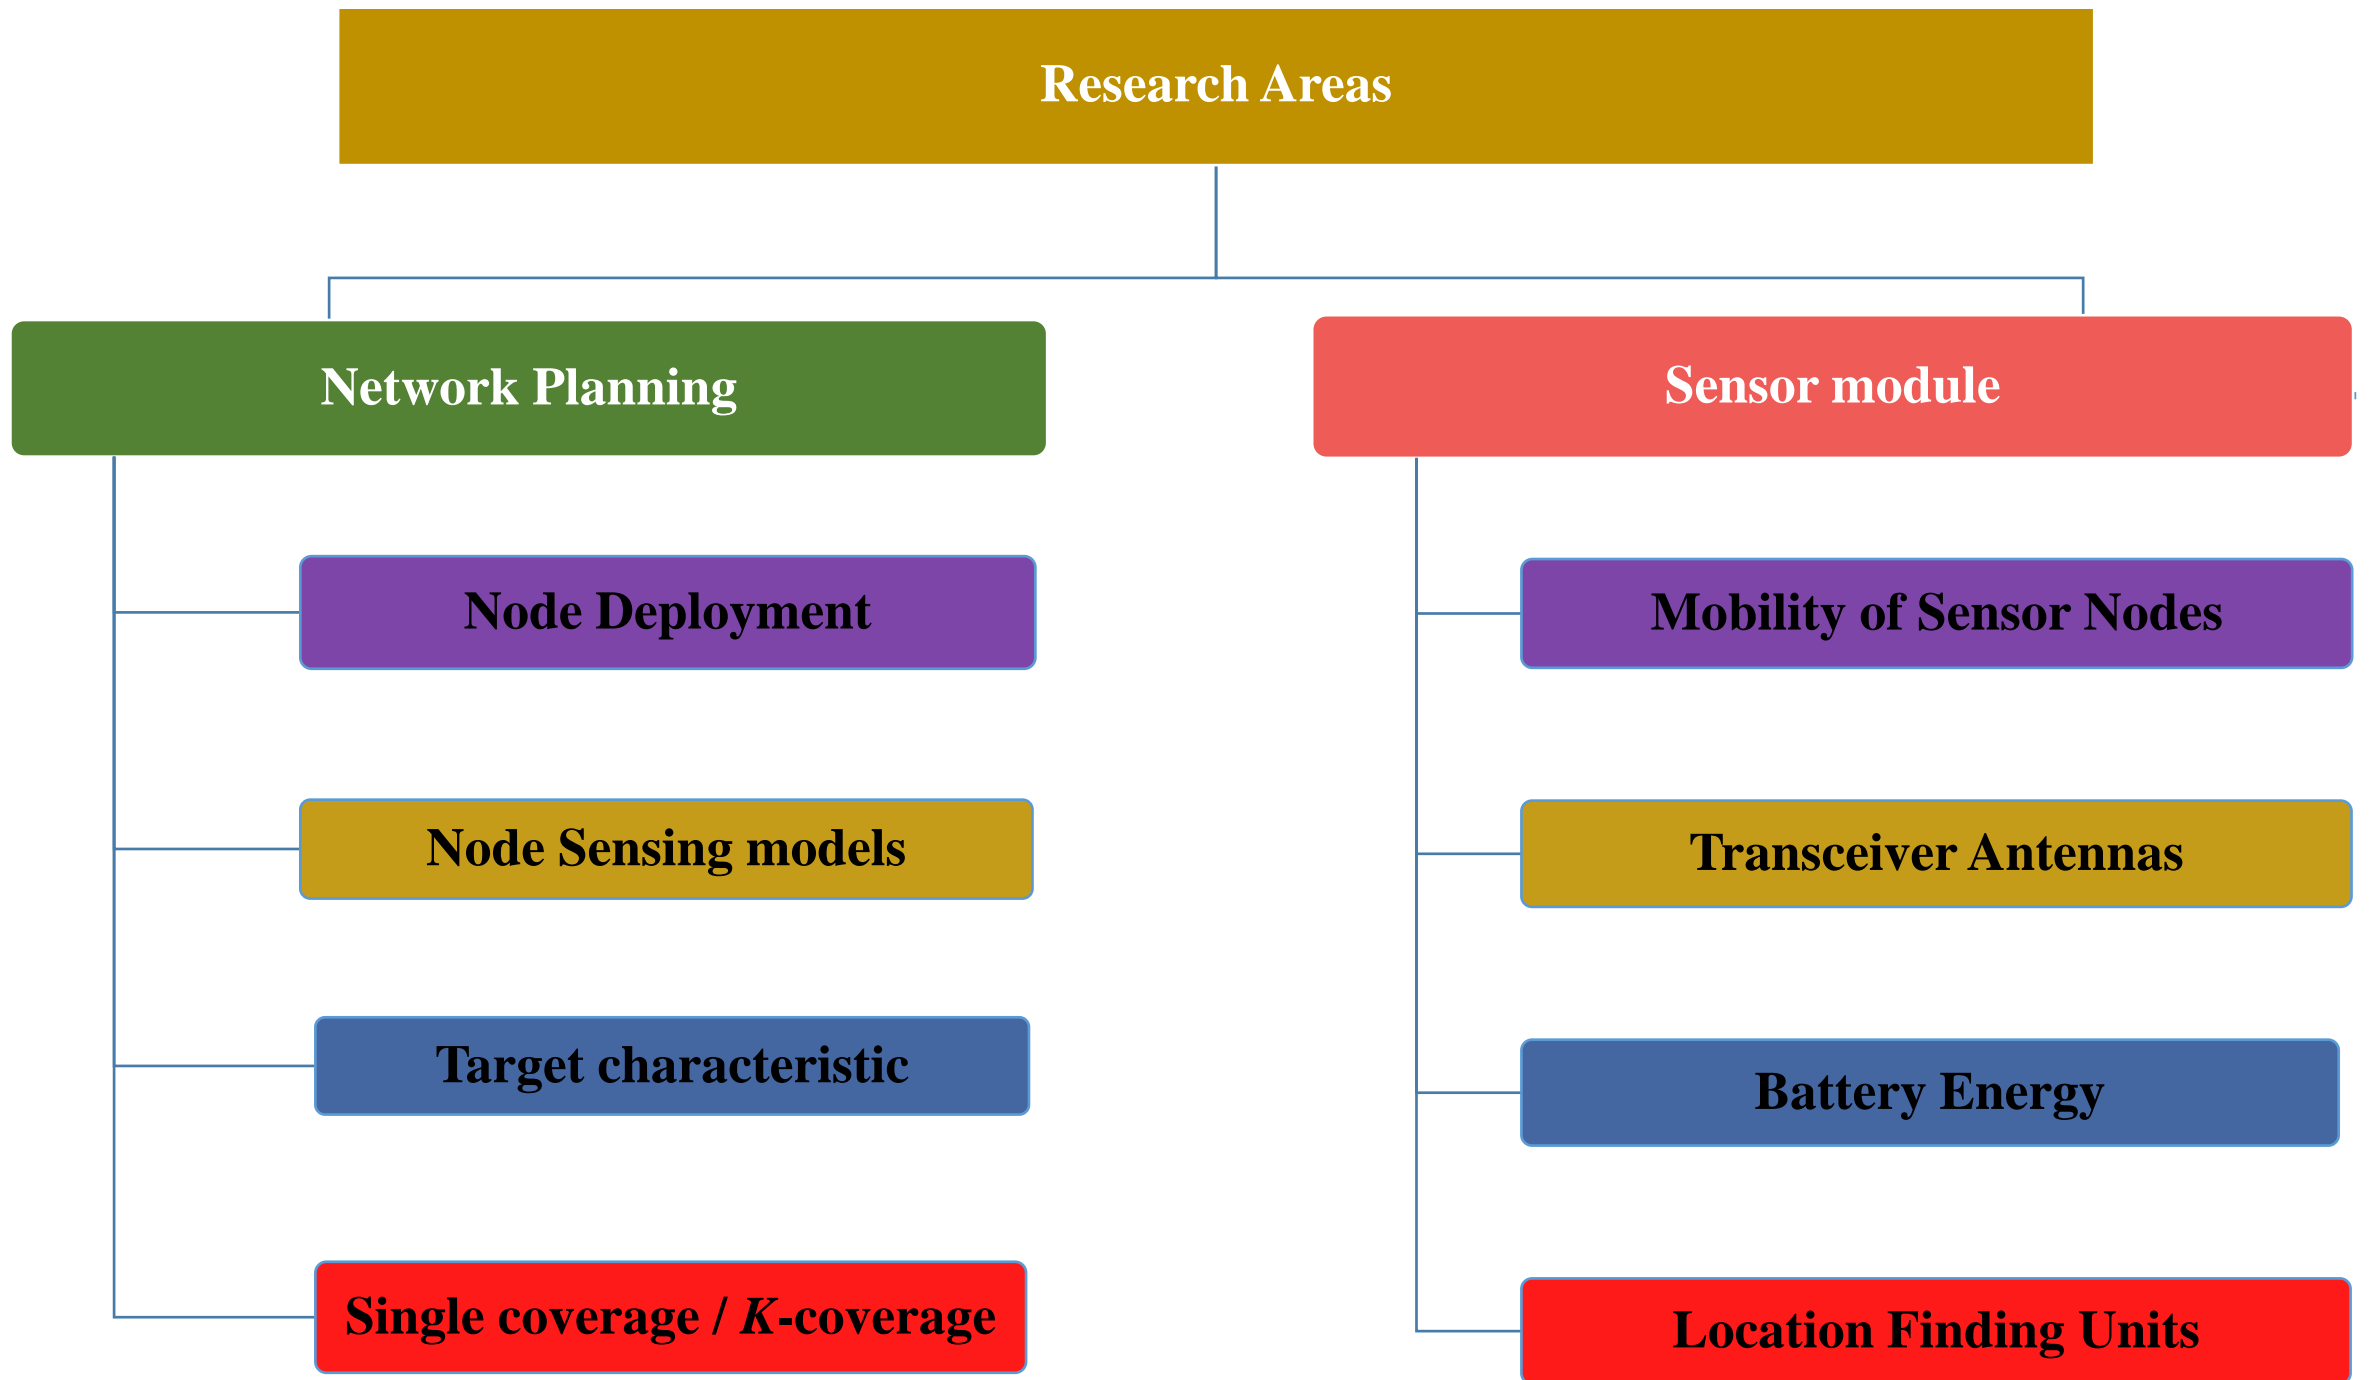

Wireless Sensor Networks (WSNs)

```
graph TD; A[Wireless Sensor Networks (WSNs)] --> B[Terrestrial Wireless Sensor Networks]; A --> C[Underground Wireless Sensor Networks]; A --> D[Underwater Wireless Sensor Networks];
```

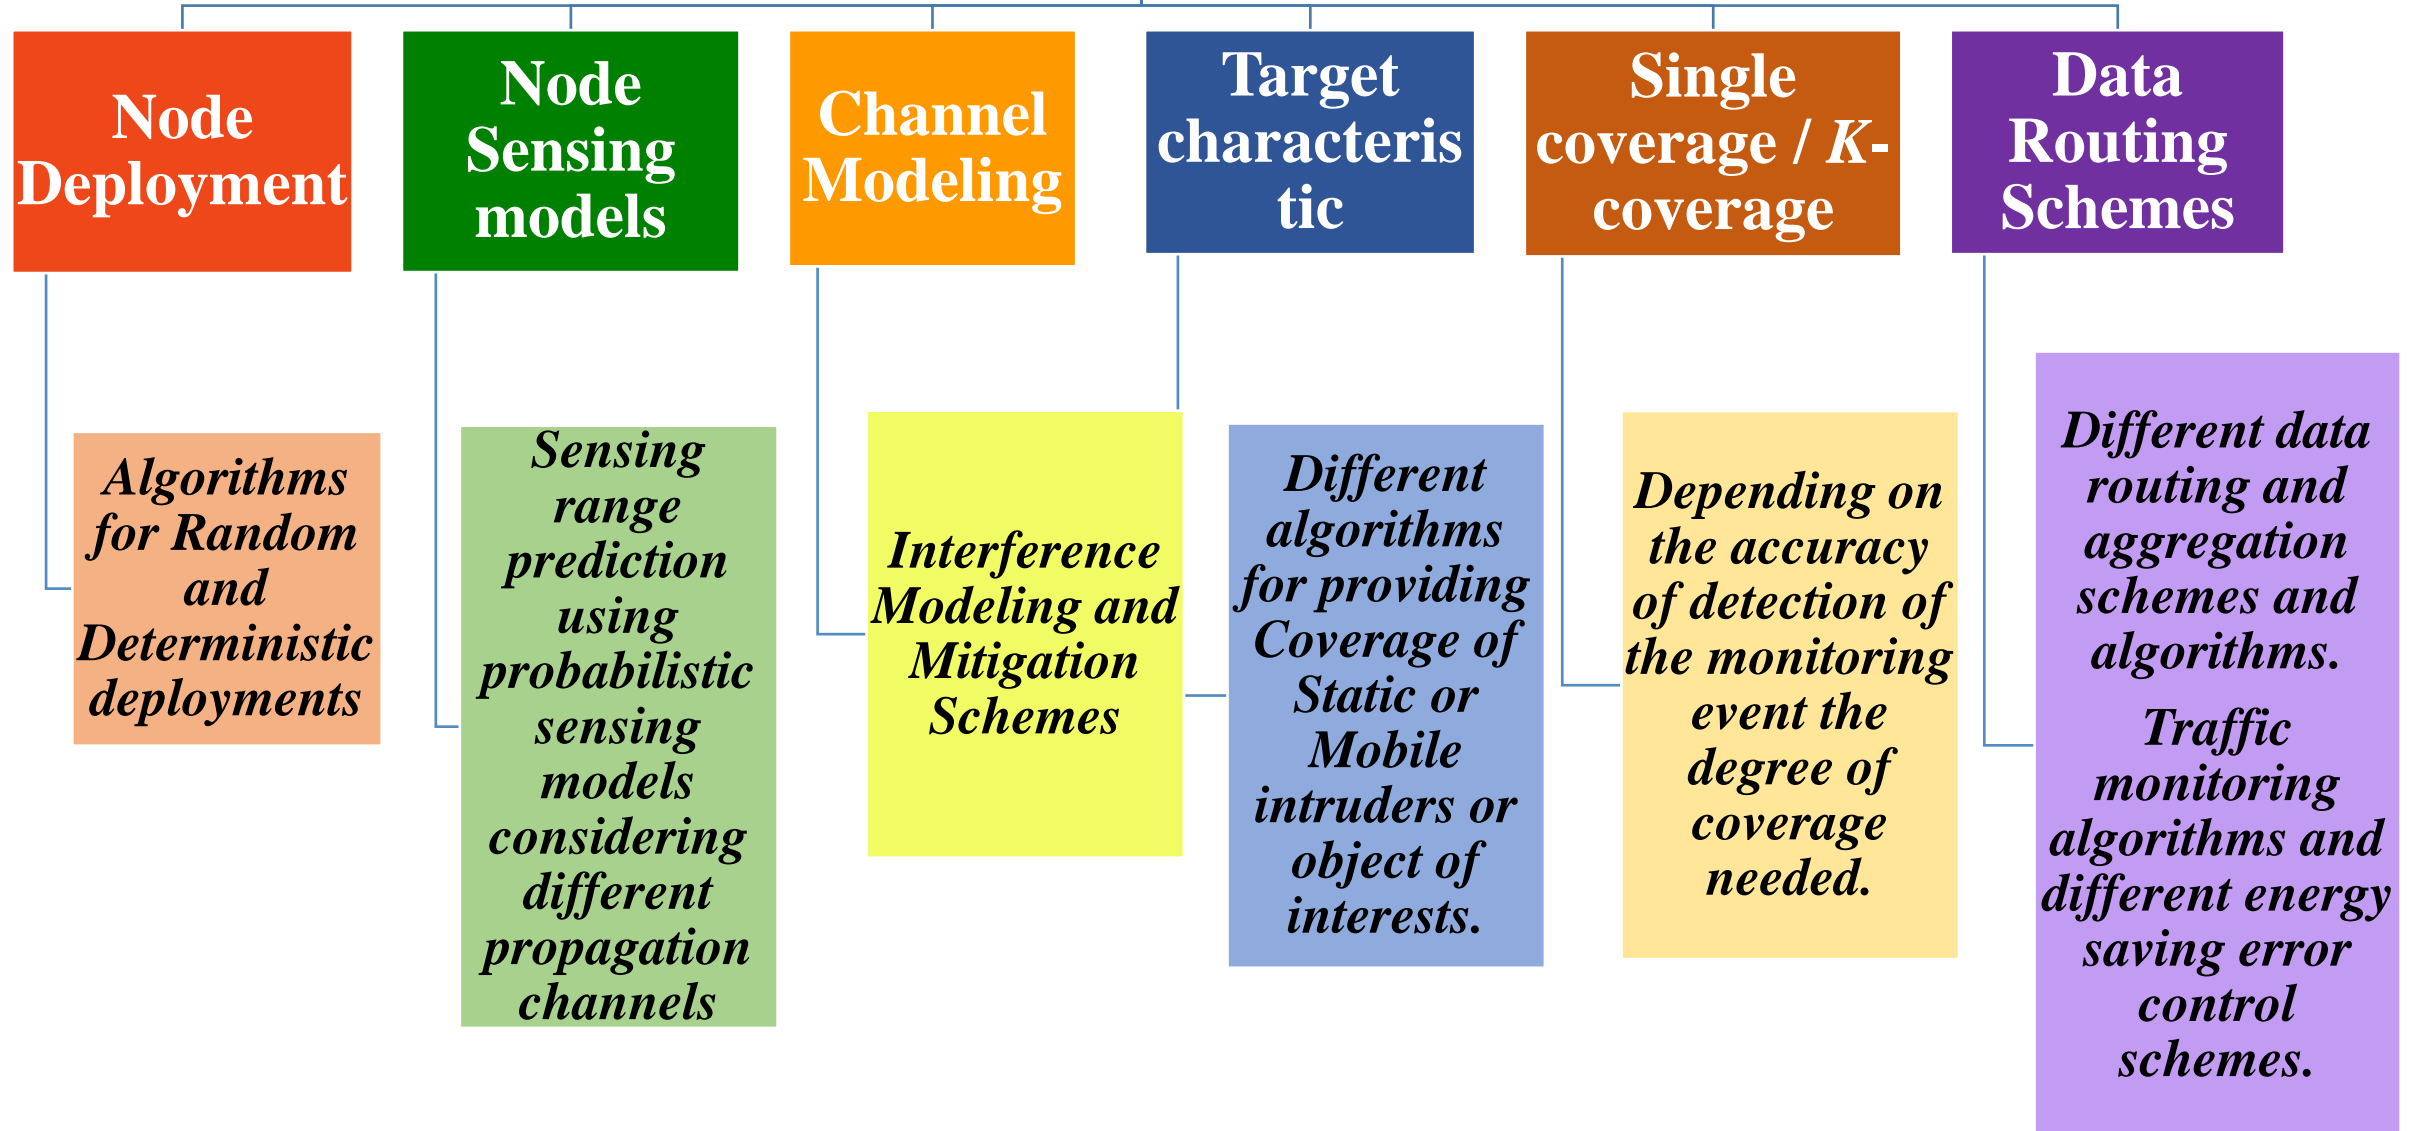

**Terrestrial Wireless Sensor
Networks**

**Underground Wireless
Sensor Networks**

**Underwater Wireless
Sensor Networks**

Network Planning

Sensor Module

```
graph TD; SM[Sensor Module] --> SMN[Static / Mobile Sensor Nodes]; SM --> TA[Transceiver Antennas]; SM --> BE[Battery Energy]; SM --> LFU[Location Finding Units]; SMN --> SMN1[1. Static/ Stationary Sensor Networks]; SMN --> SMN2[2. Mobile Sensor Networks]; SMN --> SMN3[3. Hybrid Sensor Networks]; TA --> TA1[Depending upon the requirements of applications]; TA --> TA2["(a number of antennas is available for fulfilling the purpose)"]; BE --> BE1[1. Energy Harvesting Techniques e.g. Solar cells]; BE --> BE2[2. Node Scheduling schemes]; LFU --> LFU1[1. GPS enabled Sensor Nodes]; LFU --> LFU2[2. Mathematical algorithms for reference location calculation];
```

Static / Mobile Sensor Nodes

- 1. Static/ Stationary Sensor Networks*
- 2. Mobile Sensor Networks*
- 3. Hybrid Sensor Networks*

Transceiver Antennas

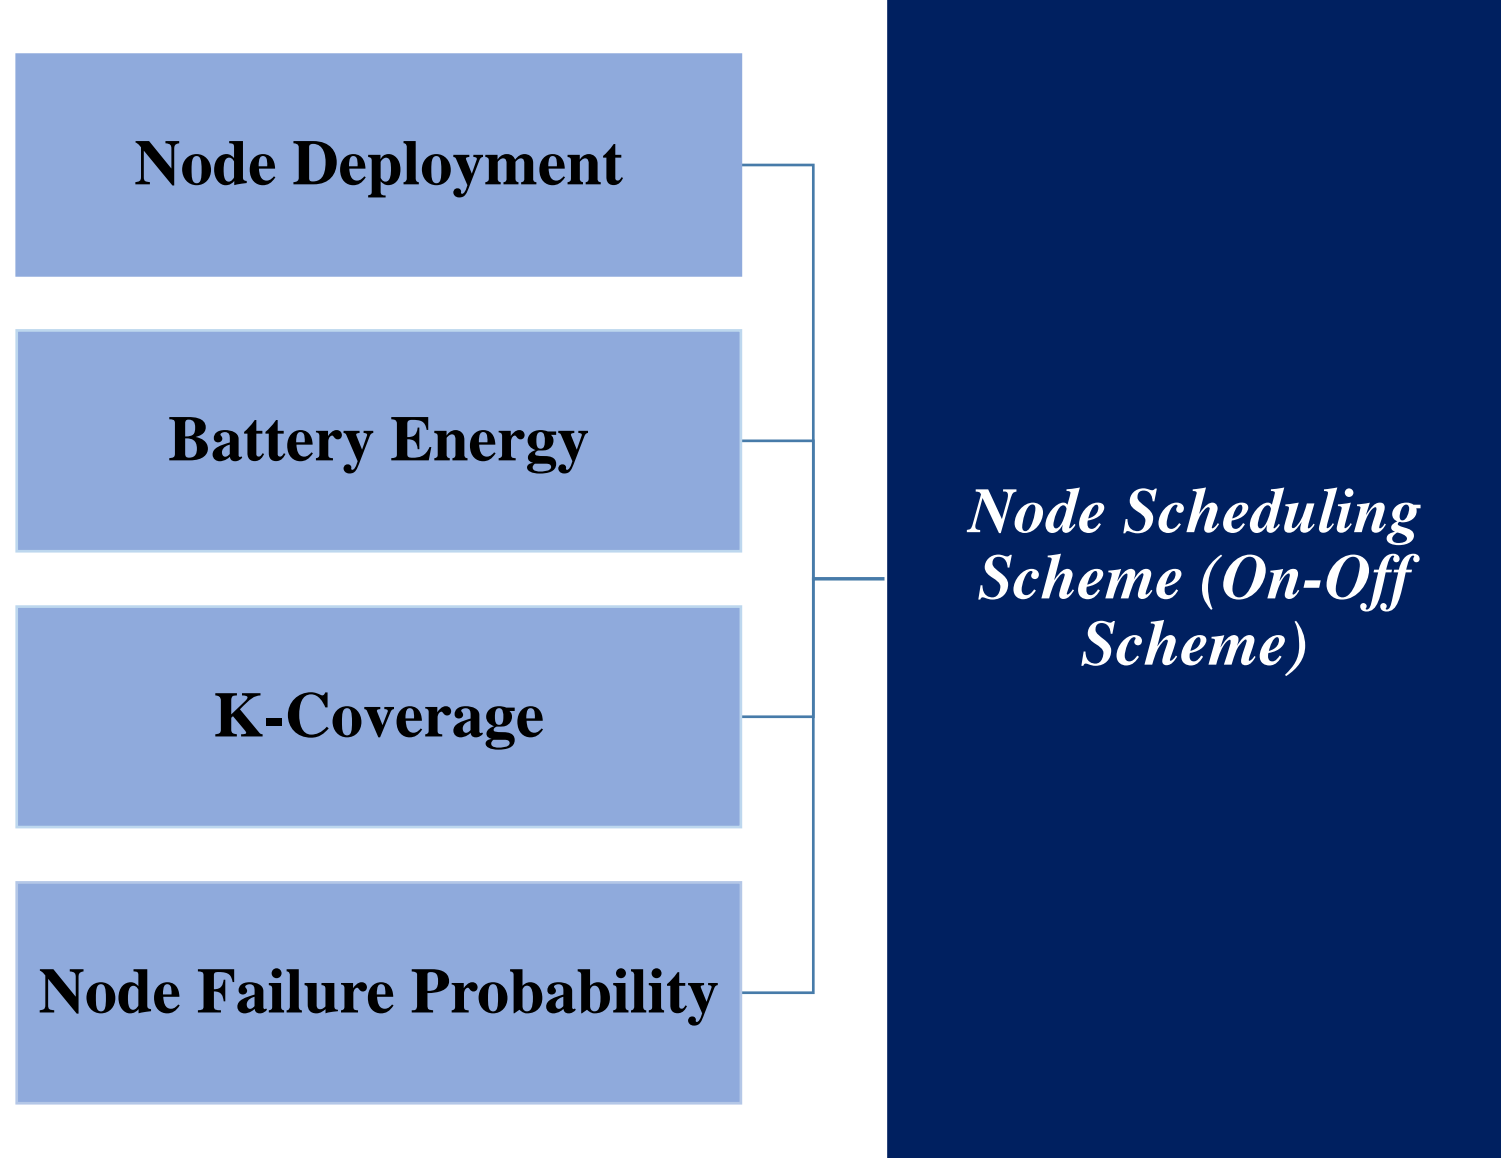

*Depending upon the requirements of applications
(a number of antennas is available for fulfilling the purpose)*

Battery Energy

- 1. Energy Harvesting Techniques e.g. Solar cells*
- 2. Node Scheduling schemes*

Location Finding Units

- 1. GPS enabled Sensor Nodes*
- 2. Mathematical algorithms for reference location calculation*

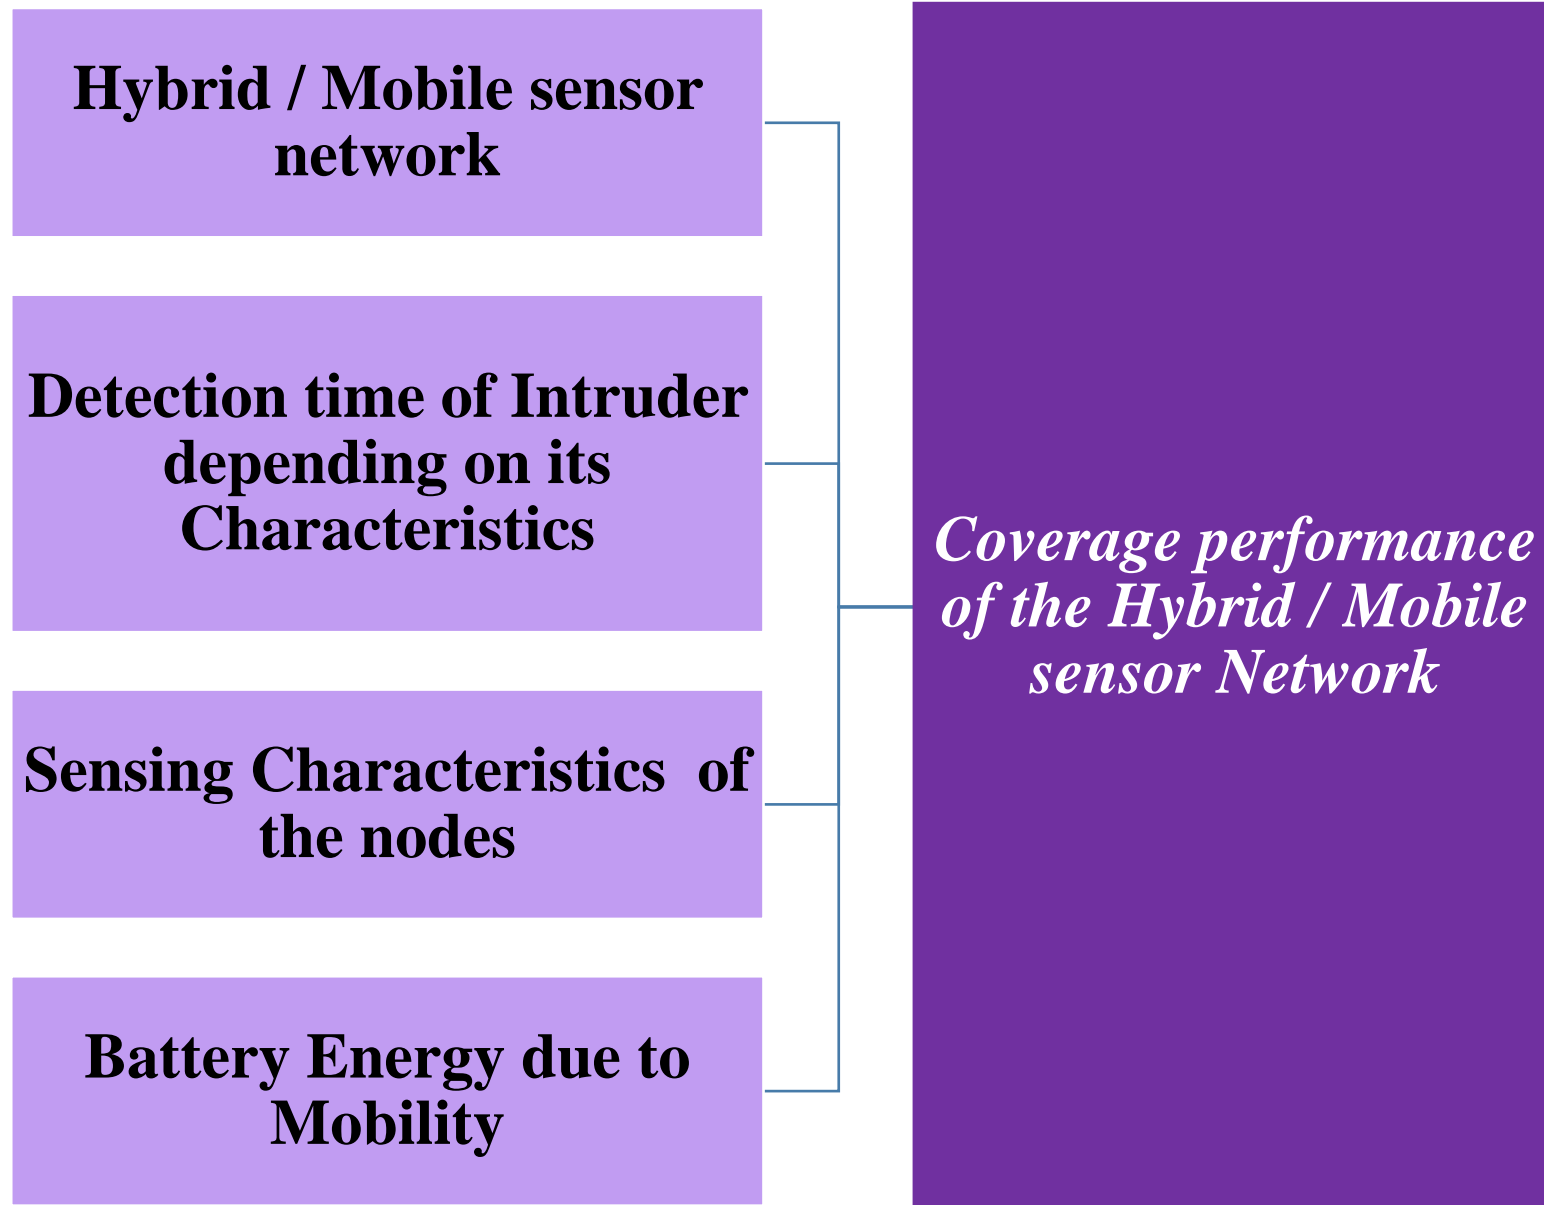

**Co-channel Interference
Effect**

Battery Energy

Coverage

*Interference Modeling
and finding the
optimal trade-off
between Coverage and
Successful detection
Probability*

Mobile sensor Network (MSNs)

```
graph TD; MSNs[Mobile sensor Network (MSNs)] --- H[Hybrid or Mixed Sensor Network]; MSNs --- D[Detection time of Mobile / Static Intruder]; MSNs --- M[Mobility Models]; MSNs --- B[Battery Energy due to Mobility]; M --- M1[1. Random Way Point Mobility Model]; M --- M2[2. Pathway Mobility Model]; M --- M3[3. Gauss Markov Mobility Model]; M --- M4[4. Straight line Mobility Model]; M --- M5[5. Brownian Motion Mobility Models];
```

*Hybrid or Mixed
Sensor Network*

*Detection time of
Mobile / Static
Intruder*

Mobility Models

- 1. Random Way
Point Mobility
Model*
- 2. Pathway Mobility
Model*
- 3. Gauss Markov
Mobility Model*
- 4. Straight line
Mobility Model*
- 5. Brownian Motion
Mobility Models*

*Battery Energy
due to Mobility*
