

# Software and Cybersecurity Lab

## CS445 Lab8

**Name: Dipean Dasgupta**

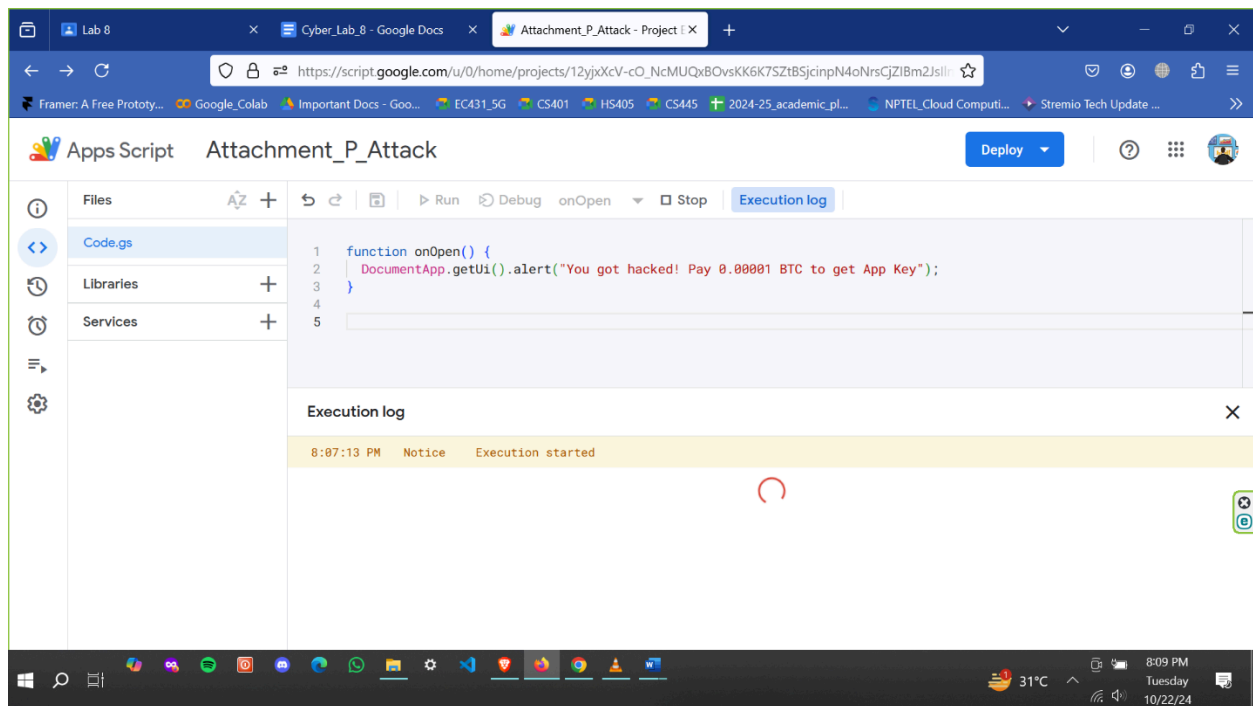

**ID: 202151188**

**Task: Executing different types of Phishing attacks**

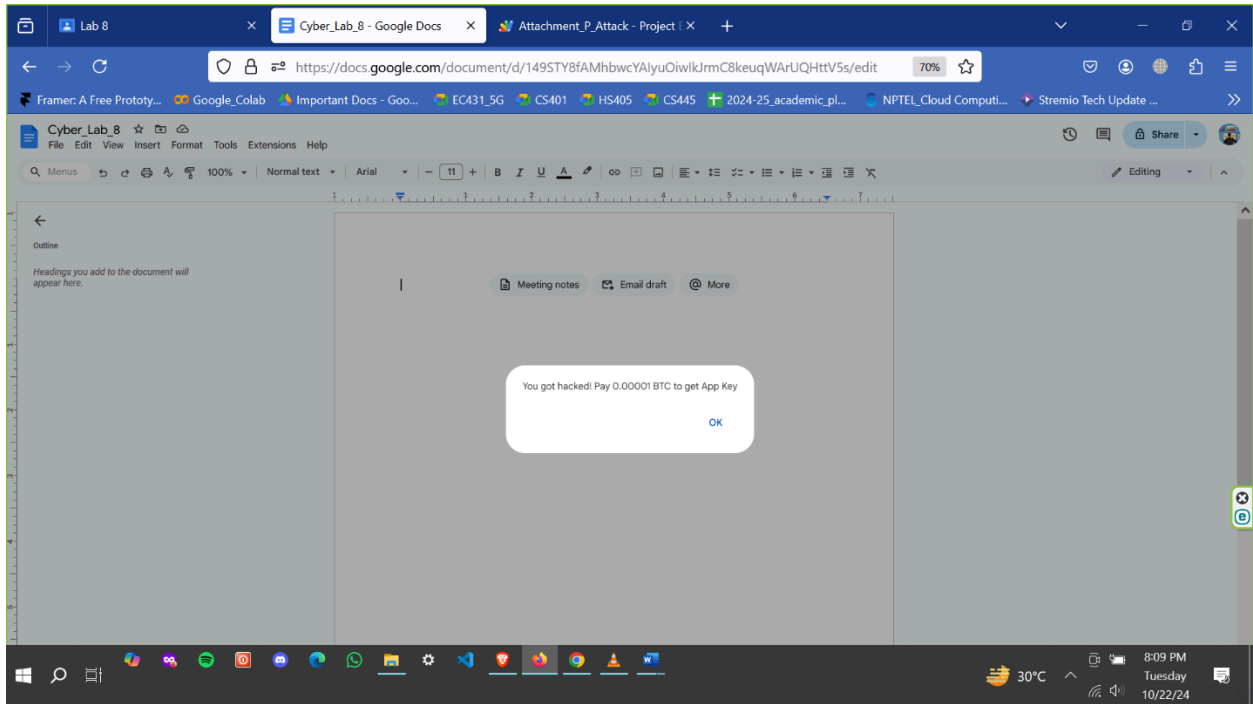

### **Subtask1: Attachment Based Phishing Attack**

First, Google docs was open and a new doc file was created. Then from extensions, AppScript was initiated. In AppScript The code below was written:

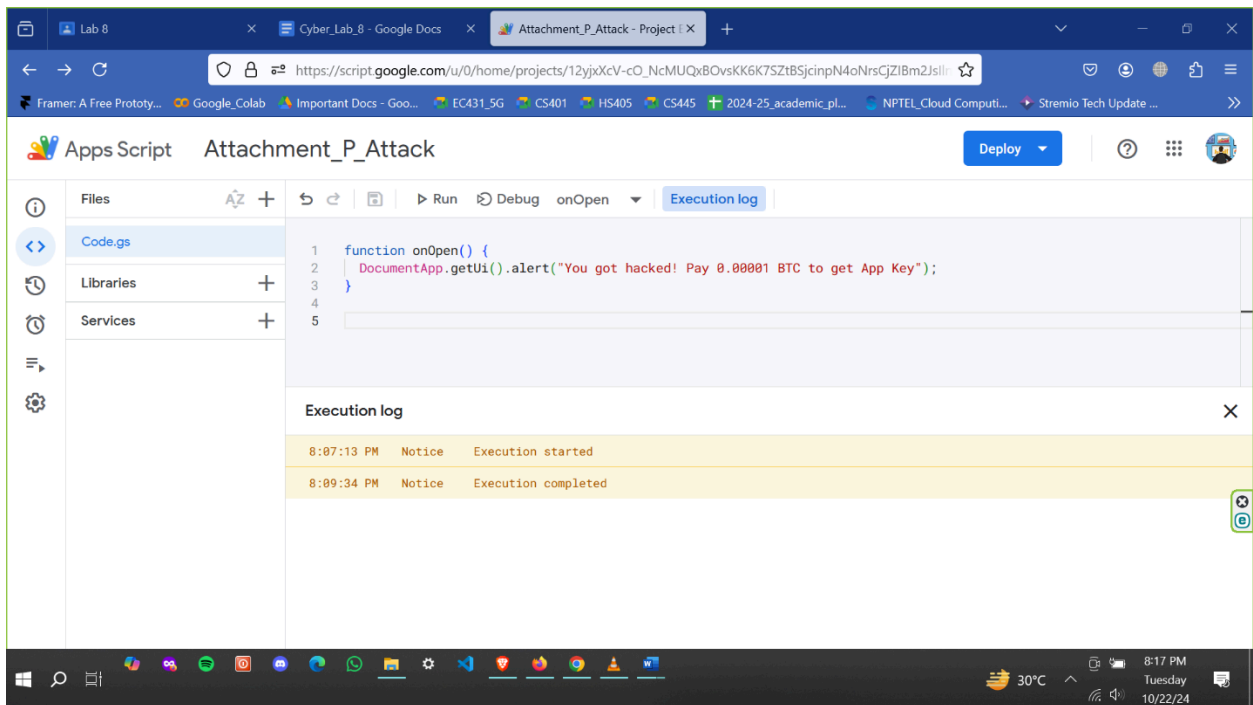

```
function onOpen() {  
  DocumentApp.getUi().alert("You got hacked! Pay 0.00001 BTC to get App Key");  
}
```

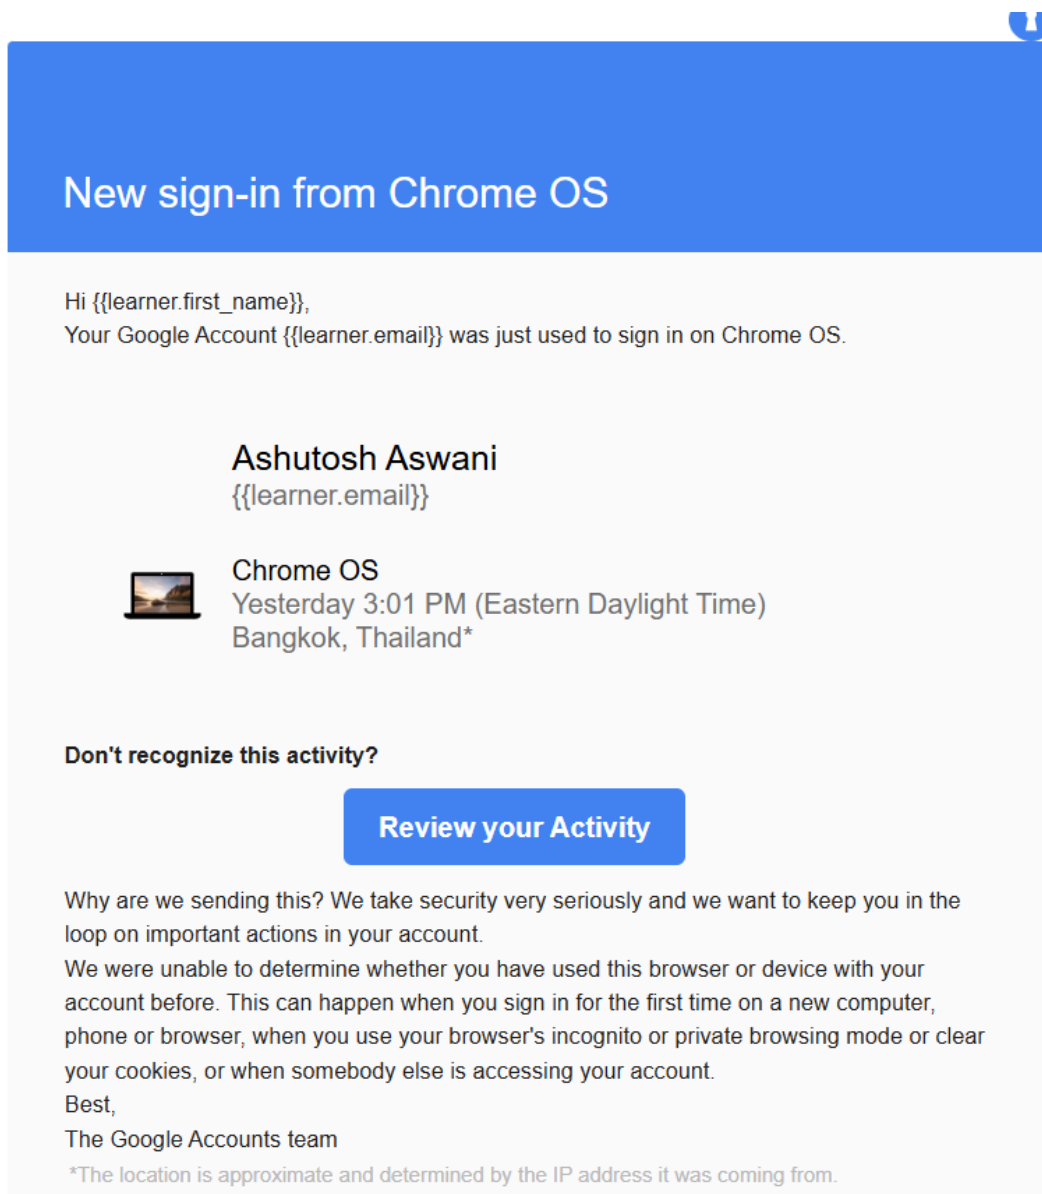

After writing, the code was run and that notified starting of execution. As soon as it was run, the following hack message was seen in the doc.

On clicking okay the execution was completed and notified.

## Subtask2: Credential Harvesting Attack
