

Exercises

Are you doing enough home work?

- Find the size of float, double and long double for your machine.

- Write a C program that finds and prints the right most digit of the integral portion of float

- $x = 2 \% 2 + 2 * 2 - 2 / 2;$

Evaluate the expression

- Declare two Boolean variables, assign values to them and print those values.

Operators	Associativity
()	left to right
* / %	left to right
+ -	left to right
< <= > >=	left to right
== !=	left to right
=	right to left

Fig. 2.14 | Precedence and associativity of the operators discussed so far.

Make an expression to prove this precedence
